Multicultural Profile Assignment

The classroom is very much diverse when it comes to ethnicity. The largest groups of ethnicity are African American and Hispanic. These two groups are basically evenly distributed across the classroom with a few more who are African American. The least group of ethnicity are those who are Caucasian. This group consists of about two students across the class. I have not truly noticed the ethnicity differences in the classroom because there is not much emphasis placed on this. The school, as a whole, is very diverse which make the classroom seem like a normal setting for the students.
When it comes to the ratio between males and females, the students are evenly distributed throughout the classroom. I have not noticed a huge difference between students gender. Also, there is not a significant different between the skill levels of each student. Overall, each student is basically on the same and appropriate level as the other students in the class. There are a few students who are slightly lower than the others, but Ms. Fallos responds to those needs accordingly.

I feel that Ms. Fallos treats everyone equally without any type of favoritism or extra assistance to particular students who are well liked. She feels each student deserves the same education as their neighbor and is willing to help with any students that needs assistance based on their educational needs. She places the students in a mixed way according to skill, ethnicity, and gender around the classroom. However, I have also not noticed any cultural celebrations, which could be good or bad. I think it is good for the students to know and respect other cultures around the world and an easy way to make this happen is to celebrate different holidays within each culture.
